

SEO Audit Report — Saat Hesaplama

Project: Time Calculator Hour Calculator v.1 | Site: <https://isaathesaplama.tr> | Audit date: June 17, 2026 | Mode: READ-ONLY codebase analysis | Total checklist items: 97 | Passing: 47 | Failing / not verified: 50

PASSING ITEMS (47)

1. A6 Meta description contains natural keyword variation — `src/lib/pages-seo.ts`, per-page metadata in `src/app/**/page.tsx`
2. B1 Only ONE H1 per indexable page — verified across all `src/app/**/page.tsx` and hero components
3. B2 H1 differs from Title Tag but is topically aligned — e.g. home title vs H1 Saat Hesaplama in `hero-section.tsx`
4. B5 Primary keyword in at least one H2 — home `CalculatorContentSection`, `calculator-guide-section.tsx`, `saat-ucreti/seventy-two-hours` content
5. B6 Heading hierarchy mostly logical H1! H2! H3 — `content-layouts.tsx`, `hakkimizda/pa`
6. C1 URL contains primary keyword, clean hyphenated slugs — `/saat-farki-hesaplama`, `/72-saat-kac-gun`, etc.
7. C2 URLs lowercase with hyphens — all Turkish routes in `src/app/`
8. C4 Consistent URL structure for calculator category — `/saat-*-hesaplama` pattern
9. C5 No parameter-based indexable URLs — static App Router paths only; `robots.ts` disallows `/api/`
10. D1 Primary keyword in first 100 words — `hero-section.tsx`, `seventy-two-hours` hero, `saat-*` page intros
11. D3 LSI/semantic keywords in content — `calculator-page-content.ts`, `saat-ucreti-content.ts`, `seventy-two-hours-content.ts`
12. D4 Content matches tool/search intent — calculator pages serve time-calculation queries
13. D6 Original Turkish content (not spun templates on live routes) — `src/lib/*-content.ts`
14. D7 FAQ with real question phrasing on 3 pillar pages — home, `/72-saat-kac-gun`, `/saat-ucreti-hesaplama`
15. E2 Images compressed under 100KB — `public/images/*-webp` (largest image `1.webp` ~32 KB)
16. E3 Every runtime image has descriptive ALT — `LazyImage` + `next/image` across `src/components/`
17. E4 ALT tags read naturally in Turkish — verified in `lazy-image.tsx` (title falls back to alt)
18. E6 Lazy loading on below-fold images — `src/components/ui/lazy-image.tsx` default `loading=lazy`
19. E7 OG image 1200×630 WebP — `src/lib/constants.ts` `OG_IMAGE` `/branding/og-image.webp`
20. E8 No text baked into content images — `headings/body` are HTML text
21. F2 Primary calculator linked from homepage — `CalculatorCard` on `src/app/page.tsx`, CTA to `/#araclar`
22. F4 Descriptive anchor text — `Header.tsx`, `Footer.tsx`, `legal-hub-layout.tsx` (no click here)
23. F5 No exact-match anchor overuse detected — varied Turkish labels in `NAV_LINKS`, `FOOTER_LINKS`
24. F7 Internal routes resolve to real pages — App Router pages + `next.config.mjs` 301 redirects for English aliases
25. F8 No redirect chains — single-hop permanent redirects in `next.config.mjs`
26. F9 Total links per page well under 150 — header/footer + section links
27. G1 FAQ schema on pages with FAQ UI — `generateFAQSchema` in `page.tsx` for `/`, `/72-saat-kac-gun`, `/saat-ucreti-hesaplama`
28. G2 BreadcrumbList schema sitewide on content pages — `buildPageSchemas()` in `src/lib/seo.ts`
29. G3 SoftwareApplication schema on homepage — `generateSoftwareApplicationSchema` in `src/app/page.tsx`
30. G4 Organization schema on every page via layout — `generateOrganizationSchema` in `src/app/layout.tsx`
31. G7 No conflicting duplicate schema types on same page — `WebPage` + `FAQPage` + `SoftwareApplication` on home is valid
32. H1 Self-referencing canonical on metadata pages — `alternates.canonical` in `generatePageMetadata` (`src/lib/seo.ts`)
33. H3 No separate AMP/mobile/print versions — single responsive site
34. H5 Thin legal pages handled via `noindex` — `generateLegalPageMetadata` on policy pages
35. I2 About Us page live — `/hakkimizda` indexed via `generateIndexablePageMetadata`
36. I3 Privacy Policy & Terms live in footer — `/gizlilik-politikasi`, `/kullanim-kosullari` (`noindex` but linked)
37. I6 Contact page with email — `/iletisim` (`info@saathesaplama.com` in `seo.ts` Organization schema)

38. J3 Clear contrasting CTAs — hero-section.tsx Hesaplamaya Basla, accent buttons sitewide
39. J4 Max 3 clicks from homepage — all main pages in Header/Footer NAV_LINKS
40. J5 Bullet/numbered lists for scannability — calculator-guide-section, content-layouts FourStepCards
41. J7 Multimedia adds value — hero background video (hero-section.tsx), step/use-case WebP visuals
42. K2 What is [topic] sections on rich pages — ADD_SUBTRACT_INTRO, SEVENTY_TWO_HOURS_HERO paragraphs
43. K3 FAQ natural Who/What/How phrasing — CALCULATOR_FAQS, SEVENTY_TWO_HOURS_FAQS, SAAT_UCRETI_FAQS
44. K4 HowTo/step sections in UI — FourStepCards, HOW_IT_WORKS, calculator-guide-section STEPS
45. K7 Tabular comparison data — MANUAL_ADD_EXAMPLE exampleRows tables in content
46. K12 Brand + tool name paired — SITE_NAME Saat Hesaplama in titles, constants, schema
47. K1 Concise direct answer at top — 72-saat hero: $72 \div 24 = 3$ gün in first paragraph (seventy-two-hours-content.ts)

FAILING ITEMS (50)

1. A1 Title primary keyword at start (first 60 chars) — FAIL: / title starts Daha İyi Sonuclar; /saat-ucreti-hesaplama starts En Kapsamli (pages-seo.ts)
2. A2 Title length 50–60 characters — FAIL: / (61), /saat-hesaplama (78), /saat-ucreti-hesaplama (79); too short: /saat-ekleme (28), /iletisim (25)
3. A3 Unique title per page — FAIL: / and /saat-hesaplama share identical title (pages-seo.ts HOME_PAGE duplicated in saat-hesaplama/page.tsx)
4. A4 Meta description 140–160 chars — FAIL: too long on / (164), /72-saat-kac-gun (168), /saat-ucreti (163); too short on /saat-farki (109), /saat-ekleme (97), /hakkimizda (101)
5. A5 Unique meta description — FAIL: / and /saat-hesaplama identical descriptions
6. B3 H2 covers main subtopics — FAIL on thin tool routes: /saat-ekleme, /saat-cikarma, /saat-farki-hesaplama, /calisma-saati-hesaplama (H1 + intro only)
7. B4 H3–H6 for nested detail only — PARTIAL FAIL: Footer.tsx uses h3 for column titles
8. C3 URL max 3–4 words — BORDERLINE FAIL: /sorumluluk-reddi, /gizlilik-politikasi exceed keyword-focused brevity guideline
9. D2 Keyword density 1–2% — NOT VERIFIED in codebase; thin pages likely under-optimized
10. D5 Word count vs SERP average — FAIL: /saat-ekleme, /saat-cikarma, /saat-farki-hesaplama, /calisma-saati-hesaplama lack supporting content sections
11. D8 Answer-first structure in each H2 — FAIL: many H2 sections lead with setup text not direct answers (calculator-page-content.ts)
12. D9 Content date-stamped when refreshed — FAIL: main tool/pillar pages lack dateModified; only legal/author show LEGAL_LAST_UPDATED
13. D10 Bold/italic for answer phrases — FAIL: minimal usage; styling via font-bold classes not semantic emphasis on answers
14. E1 All images in WEBP — FAIL: public/branding/favicon.ico, 17 unused SVG duplicates, hero-background.mp4/.webm (video assets)
15. E5 Descriptive image file names — FAIL: public/images/image1.webp, image2.webp (manual-subtract-section.tsx)
16. F1 Every page linked internally — FAIL: 5 orphan calculator URLs in sitemap only: /saat-hesaplama, /saat-farki-hesaplama, /saat-ekleme, /saat-cikarma, /calisma-saati-hesaplama
17. F3 Internal links in first 3–4 paragraphs — FAIL: home hero links to /#araclar not cross-page tool URLs; thin pages have no early body links
18. F6 Pillar/supporting topic cluster inter-linking — FAIL: sub-tool pages not linked from home content or footer TOOL_LINKS (only 3 tools listed)
19. F10 Related tool links at bottom of each tool page — FAIL: no related-tools component on any calculator page
20. G3 SoftwareApplication on ALL tool pages — FAIL: only homepage src/app/page.tsx; missing on /saat-farki-hesaplama etc.
21. G4 Organization schema social profiles — FAIL: generateOrganizationSchema lacks sameAs; footer social URLs are generic platform homepages (constants.ts)

- 22. G5 Article schema on supporting content — FAIL: not implemented anywhere in src/lib/seo.ts
- 23. G6 VideoObject schema where video embedded — FAIL: hero-section.tsx background video has no VideoObject JSON-LD
- 24. G8 Schema validated (Rich Results Test) — NOT VERIFIABLE from codebase; no test artifacts present
- 25. H2 Paginated rel=next/prev — N/A FAIL: no pagination implemented
- 26. H4 No duplicate meta titles/descriptions — FAIL: / vs /saat-hesaplama duplicate pair
- 27. H5 Thin indexable pages <300 words — FAIL: /saat-ekleme, /saat-cikarma, /saat-farki-hesaplama, /calisma-saati-hesaplama indexed but content-thin
- 28. I1 Author attribution on all content pages — FAIL: only /hakkimizda and /yazar/aylin-durmus; calculator/pillar pages lack byline
- 29. I4 External citations to authoritative sources — FAIL: no outbound links to gov/academic/standards sources in live Turkish content
- 30. I5 Fact-checked stats freshness — FAIL: TRUST_STATS 10.000+ users / 99.99% unverified; no source citations (constants.ts)
- 31. J1 Table of Contents for 1500+ word pages — FAIL: not implemented on home or pillar pages
- 32. J2 Tool/calculator above the fold — FAIL: home HeroSection scrolls before CalculatorCard; /72-saat-kac-gun and /saat-ucreti calculators below hero sections
- 33. J6 No layout shift on result load (CLS=0) — NOT VERIFIED; client-side result state in calculator-card.tsx may cause shift
- 34. J8 Social sharing on pillar/blog pages — FAIL: no page-level share buttons; only WhatsApp in calculator-result-actions.tsx after calculation
- 35. K5 Speakable schema — FAIL: not implemented
- 36. K6 Each H2 self-contained/isolation — PARTIAL FAIL: content sections depend on prior context
- 37. K8 Key Takeaways summary box near top — FAIL: not present on tool or pillar pages
- 38. K9 Tool output includes explanatory sentence — PARTIAL FAIL: outputs are labeled strings (Saat Farki: X) not full explanatory prose (calculator-card.tsx)
- 39. K10 Citation-friendly phrasing — FAIL: limited According to / Based on language in content files
- 40. K11 Wikipedia/Wikidata/authoritative directory presence — NOT IN CODEBASE / external presence not evidenced
- 41. K13 Key facts avoid hedging — PARTIAL FAIL: marketing copy uses superlatives (en gelismis, kanitlanmis) without sourced claims
- 42. K14 Tested in ChatGPT/Gemini/Perplexity — NOT VERIFIABLE from codebase
- 43. K15 Tool result pages indexable with static crawlable text — FAIL: results rendered client-side via useState; empty until user calculates
- 44. EXTRA Broken hero video poster — hero-section.tsx poster=/og-image.webp but OG lives at /branding/og-image.webp (404 risk)

Executive Summary

Strengths: Solid technical SEO foundation — canonical tags, robots/sitemap, WebPage + BreadcrumbList schema, FAQ schema on 3 pillar pages, Organization/WebSite global schema, WebP image pipeline with lazy loading, OG image at 1200x630, E-E-A-T pages (About, Contact, Legal), and rich content on homepage plus /72-saat-kac-gun and /saat-ucreti-hesaplama.

Critical gaps: Duplicate title/description on / and /saat-hesaplama; 5 calculator sub-routes are sitemap orphans with thin content; title/meta length off-target on multiple URLs; missing SoftwareApplication schema on sub-tools; no VideoObject for hero video; no author bylines on tool pages; calculator results not crawlable as static HTML; no related-tools internal linking; AEO items (Speakable, Key Takeaways, citation phrasing) largely absent.

Pages audited: 21 route files (15 Turkish content, 6 redirect stubs). Indexable via sitemap: 10 URLs. Noindex: legal + author.

This report is observational only. No code, content, UI, or files were modified during the audit.
