

# SEO Audit Report — Saat Hesaplama

Site: <https://isaathesaplama.tr> | Date: June 19, 2026 | Scope: Post-fix re-audit (10 routes) | Passing: 43 | Failing: 13 | Developer tasks: 10

## DEVELOPER — PRIORITY FIXES (Start)

### A1-A2-A4 — Title & meta description lengths

Issue: Home title 60 chars (keyword not at start). Wage title 78 chars. Meta desc: 72h=171, wage=164, about=97, contact=109 (target 140–160).

Fix: Edit `src/lib/pages-seo.ts` and page metadata in `src/app/hakkimizda/page.tsx`, `src/app/iletisim/page.tsx`. Lead with primary keyword; trim to 50–60 (title) and 140–160 (description).

### F6-F10 — Topic cluster & related tools

Issue: Only footer links connect tools. No dedicated “Related Tools” block at the bottom of each tool page.

Fix: Add a RelatedTools component using `TOOL_LINKS` from `constants.ts`; place it above the footer on `/`, `/72-saat-kac-gun`, and `/saat-ucreti-hesaplama`.

### J2 — Calculator below the fold

Issue: Home: HeroSection renders before CalculatorCard (`#araclar`). Mobile users must scroll to use tool.

Fix: Move compact calculator into hero grid or add sticky mobile CTA bar linking to `#araclar`.

### I1 — Author byline on content pages

Issue: Author shown only on `/hakkimizda` and `/yazar/aylin-durmus`. Tool pages lack E-E-A-T attribution.

Fix: Add compact byline component linking to `/yazar/aylin-durmus` on indexable tool/pillar pages.

### K2-K8 — AEO content blocks missing

Issue: `seo-content-section.tsx` (“What is Saat Hesaplama?”) exists but is not mounted. No Key Takeaways box on tool pages.

Fix: Mount `seo-content-section` on the homepage. Add a Key Takeaways / summary box under the hero on pillar pages.

### D9-D10 — Freshness & answer emphasis

Issue: Tool pages lack a visible “Last updated” date. Key answers are not semantically bolded.

Fix: Display `CONTENT_SCHEMA_DATES.dateModified` on pages. Use `<strong>` on direct answers (e.g. 72 hours = 3 days).

### G4 — Organization sameAs generic URLs

Issue: `sameAs` uses `youtube.com/`, `facebook.com/` etc. — not brand-specific profile URLs.

Fix: Update `FOOTER_SOCIAL_LINKS` in `constants.ts` with real profile URLs when available.

### G8 — Schema not validated in production

Issue: No Rich Results Test evidence in repo.

Fix: Validate `/`, `/72-saat-kac-gun`, `/saat-ucreti-hesaplama` in Google Rich Results Test before launch.

### K15 — Calculator results not crawlable

Issue: Results render via client `useState` — empty HTML until the user clicks Calculate.

Fix: Add static example result snippets in HTML for default/demo values, or SSR placeholder text for bots.

### H5-J8 — Thin pages & social share

Issue: `/iletisim` and `/hakkimizda` under ~300 words. No share buttons on pillar pages.

Fix: Expand company pages with FAQ/trust copy. Add Web Share API or WhatsApp share on tool sections.

## RECENT FIXES (Completed)

- F7 Legacy `/contact` links fixed — `site-config.ts`, `schema.ts`, `FAQ.tsx` now point to `/iletisim`
- F7 Redirects merged into `next.config.ts` (`/contact`, `/about-us`, legal URLs); `next.config.mjs` deleted
- F7 Sitemap dead routes removed — `src/app/sitemap.ts` (5 valid URLs only)
- Contact components folder renamed — `src/components/iletisim/` (import path updated)
- G7 SearchAction removed from WebSite schema — `src/lib/seo.ts`
- G3 WebApplication schema on `/`, `/72-saat-kac-gun`, `/saat-ucreti-hesaplama`
- G4 Organization sameAs added — `FOOTER_SOCIAL_LINKS` in `generateOrganizationSchema()`
- G5 Article schema on 3 pillar pages — `generateArticleSchema()`
- G6 VideoObject on homepage — `generateHeroVideoSchema()` + `HERO_VIDEO_SCHEMA`
- K5 SpeakableSpecification — `speakableSelectors` on WebPage schema (hero IDs)
- E1 `favicon.ico` removed; all raster assets are WebP

12. E2 All public WebP images 50KB (hero-hourglass, hero-hours-days, salary-calc-visual compressed)
13. E5 Renamed image1/image2 manual-subtract-visual.webp, salary-calc-visual.webp
14. Internal linking added — cross-links for saat hesaplama and 72 saat kaç gündür in content sections
15. Legal/author pages max-w-6xl width aligned with tool pages

## PASSING ITEMS (43)

1. [A3] Unique title per live page — each `src/app/*/page.tsx` has distinct metadata
2. [A6] Meta description keyword variation on main tool pages — `pages-seo.ts`
3. [B1] One H1 per page — hero/legal hub components
4. [B2] H1 topically aligned with title — home, 72h, wage pages
5. [B3] H2 subtopics on rich pages — `SectionTitle (h2)` in `content-layouts.tsx`
6. [B5] Primary keyword in H2 — Saat Farkı Nasıl Bulunur?, Saatlik Ücret Nasıl Hesaplanır?
7. [B6] Logical heading hierarchy — no H2H4 skips on live pages
8. [C1-C2] Clean lowercase hyphen URLs — `/72-saat-kac-gun`, `/saat-ucreti-hesaplama`
9. [C4-C5] Static App Router URLs; `robots.ts` disallows `/api/`
10. [D1] Keyword in first 100 words — hero paragraphs on pillar pages
11. [D4] Content matches search intent — calculator/conversion/wage tools
12. [D7] FAQ sections on 3 pillar pages + `FAQPage` schema
13. [E1] All raster images WebP — no `.png/.jpg/.ico` in `public/`
14. [E2] Images 50KB — verified via `scripts/compress-large-images.mjs`
15. [E3-E4] Descriptive natural ALT on `LazyImage` components
16. [E5] Descriptive filenames — `manual-subtract-visual`, `salary-calc-visual`, `hero-hourglass`, etc.
17. [E6] Lazy loading default — `lazy-image.tsx`
18. [E7] OG image 1200×630 — `constants.ts` `OG_IMAGE`
19. [E8] Content text in HTML not images
20. [F2] Calculator linked from homepage header + hero `/#araclar`
21. [F4] Descriptive anchor text on internal links
22. [F7] Sitemap matches existing pages only — `sitemap.ts`
23. [F7] Contact route consistency — `/iletisim` in nav, schema, FAQ; legacy `/contact` 301 redirect in `next.config.ts`
24. [F9] Links per page well under 150
25. [G1] FAQ schema on pages with FAQ UI
26. [G2] `BreadcrumbList` on content pages — `buildPageSchemas()`
27. [G3] `WebApplication` on all 3 pillar tool pages
28. [G4] Organization schema with `sameAs` — `layout.tsx`
29. [G5] Article schema on pillar pages
30. [G6] `VideoObject` on homepage hero video
31. [G7] No conflicting `SearchAction` — removed
32. [H1] Self-referencing canonical — `generatePageMetadata()`
33. [H3] Single responsive site — no AMP
34. [I2-I3] About + legal pages live and footer-linked
35. [I6] Contact page with `info@saathesaplama.com`
36. [J3-J5] Clear CTAs, 3 clicks nav, lists/tables for scannability
37. [J7] Hero video + infographics + conversion tables
38. [K1] Direct answer in 72h hero first paragraph ( $72 \div 24 = 3$ )
39. [K3-K4] Natural FAQ phrasing + `HowTo` steps
40. [K5] `SpeakableSpecification` with CSS selectors on hero elements
41. [K7] Tabular data on wage and 72h pages
42. [K9] Calculator outputs include formatted explanatory strings
43. [K15] Pillar pages indexable with substantial static Turkish copy

## REMAINING / FAILING ITEMS (13)

### 1. [A1] Title keyword at start

Issue: Home title starts with a marketing phrase, not the primary keyword “saat hesaplama”.

Fix: Rewrite `HOME_PAGE.title` in `pages-seo.ts`.

## 2. [A2] Title length 50–60

Issue: Wage title 78 chars with suffix; home 60 borderline.

Fix: Shorten HOURLY\_WAGE\_PAGE.title.

## 3. [A4] Meta description 140–160

Issue: 72h=171, wage=164 chars; about/contact too short.

Fix: Normalize all descriptions in pages-seo.ts + company pages.

## 4. [D6] Non-filler content

Issue: Marketing phrases (e.g. kanıtlanmış, heyecan verici) read templated.

Fix: Replace with specific user scenarios in content files.

## 5. [D8] Answer-first H2 openings

Issue: Many sections open with context, not direct answers.

Fix: Lead each H2 block with one-sentence answer.

## 6. [F3] Early internal links

Issue: Most cross-links appear mid-page, not in first 3–4 paragraphs.

Fix: Add one contextual link in each hero intro paragraph.

## 7. [F10] Related tools at page bottom

Issue: Only global footer links tools; no dedicated section.

Fix: Add RelatedTools component per pillar page.

## 8. [G8] Schema validated

Issue: No Rich Results Test run documented.

Fix: Run Google Rich Results Test on production URLs.

## 9. [H5] Thin indexable pages

Issue: /hakkimizda and /iletisim under ~300 words.

Fix: Expand with trust/FAQ content.

## 10. [I1] Author on all content pages

Issue: Byline only on about/author pages.

Fix: Add author component to tool pages.

## 11. [I4-I5] Citations & fresh stats

Issue: No outbound authoritative links; TRUST\_STATS unverified.

Fix: Cite Turkish Labor Law (İş Kanunu) / TÜİK sources; update or remove unverified stats.

## 12. [J1-J2-J6-J8] UX: TOC, above-fold tool, CLS, share

Issue: Long pages lack TOC; calculator below hero; CLS unmeasured; no share buttons.

Fix: See developer action box items J2, H5-J8.

## 13. [K10-K14] AEO external signals

Issue: Citation phrasing, Wikipedia/Wikidata, AI citation tests not evidenced.

Fix: Content + off-site brand building (not code-only).

## DEVELOPER — PRIORITY FIXES (End / Checklist)

### A1-A2-A4 — [ ] 1. Title & meta description lengths

Issue: Home title 60 chars (keyword not at start). Wage title 78 chars. Meta desc: 72h=171, wage=164, about=97, contact=109 (target 140–160).

Fix: Edit src/lib/pages-seo.ts and page metadata in src/app/hakkimizda/page.tsx, src/app/iletisim/page.tsx. Lead with primary keyword; trim to 50–60 (title) and 140–160 (description).

### F6-F10 — [ ] 2. Topic cluster & related tools

Issue: Only footer links connect tools. No dedicated “Related Tools” block at the bottom of each tool page.

Fix: Add a RelatedTools component using TOOL\_LINKS from constants.ts; place it above the footer on /, /72-saat-kac-gun, and /saat-ucreti-hesaplama.

### J2 — [ ] 3. Calculator below the fold

Issue: Home: HeroSection renders before CalculatorCard (#araclar). Mobile users must scroll to use tool.

Fix: Move compact calculator into hero grid or add sticky mobile CTA bar linking to #araclar.

#### **I1 — [ ] 4. Author byline on content pages**

Issue: Author shown only on /hakkimizda and /yazar/aylin-durmus. Tool pages lack E-E-A-T attribution.

Fix: Add compact byline component linking to /yazar/aylin-durmus on indexable tool/pillar pages.

#### **K2-K8 — [ ] 5. AEO content blocks missing**

Issue: seo-content-section.tsx ("What is Saat Hesaplama?") exists but is not mounted. No Key Takeaways box on tool pages.

Fix: Mount seo-content-section on the homepage. Add a Key Takeaways / summary box under the hero on pillar pages.

#### **D9-D10 — [ ] 6. Freshness & answer emphasis**

Issue: Tool pages lack a visible "Last updated" date. Key answers are not semantically bolded.

Fix: Display CONTENT\_SCHEMA\_DATES.dateModified on pages. Use <strong> on direct answers (e.g. 72 hours = 3 days).

#### **G4 — [ ] 7. Organization sameAs generic URLs**

Issue: sameAs uses youtube.com/, facebook.com/ etc. — not brand-specific profile URLs.

Fix: Update FOOTER\_SOCIAL\_LINKS in constants.ts with real profile URLs when available.

#### **G8 — [ ] 8. Schema not validated in production**

Issue: No Rich Results Test evidence in repo.

Fix: Validate /, /72-saat-kac-gun, /saat-ucreti-hesaplama in Google Rich Results Test before launch.

#### **K15 — [ ] 9. Calculator results not crawlable**

Issue: Results render via client useState — empty HTML until the user clicks Calculate.

Fix: Add static example result snippets in HTML for default/demo values, or SSR placeholder text for bots.

#### **H5-J8 — [ ] 10. Thin pages & social share**

Issue: /iletisim and /hakkimizda under ~300 words. No share buttons on pillar pages.

Fix: Expand company pages with FAQ/trust copy. Add Web Share API or WhatsApp share on tool sections.

### **Executive Summary**

Strengths: Solid technical SEO foundation — canonical tags, sitemap, breadcrumb/FAQ/Article/Video/WebApplication schema, Speakable markup, WebP images 50KB, Organization sameAs, internal cross-links, and E-E-A-T pages (About, Contact, Legal).

Critical remaining work: Title/meta lengths, related-tools section, calculator above the fold, author byline, AEO summary box, Rich Results schema validation, and thin company pages.
